DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/08/2008 has been entered.

Applicant's amendment dated 08/27/2008 has been received and entered. Claims 7-13 are pending in the application.

Applicant's arguments with respect to claims 7 and 11 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 7-13 are rejected under 35 U.S.C 102(e) as being anticipated by Tashiro et al., US Patent Application Publication No. 2006/0176439 A1.

Claims 7-13 are anticipated by Tashiro et al. figures 80-83 and accompanying text (example 1) which discloses a member for a liquid crystal display (LCD) device comprising a first substrate (320) having an image display cell (inside main seal 322), a plurality of dummy

cells (area between dummy seal 324 and 326) formed in a periphery of the image display cell (periphery of the area closed by seal 322), wherein both the image display cell and the dummy cell are formed by a similar pixel design (e.g., rectangular with a seal member); a second substrate (330)..
